

ONE KEY ONE SYSTEM

The evolution of security, is the Key

Looking for a new or replacement master key system?

It's time to take a different approach.

An Electronic Master Key System could be the last system you need to buy.

Mechanical systems do not adapt as your business evolves. Replacing master key suites every few years is expensive, time consuming and only improves security temporarily.

Let's look at the better way...

Locking technology has evolved...

There are reasons why we continue to evolve the technology we use in everyday life.

The additional features and benefits of emerging technology give us a safe, secure and easier lifestyle against ever developing threats.

19th century

20th century

21st century

Always secure

Do you know where all your keys are?

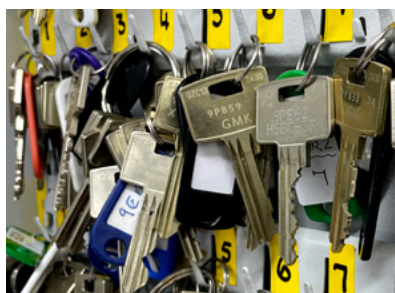

Lost and stolen keys cause stress and inconvenience as well as generating a significant security risk.

Replacing takes time and incurs a significant cost.

With an Electronic Master Key System the operation of marking a key as "lost" from the database is all that is needed to secure your staff and property. No cost, no fuss, no stress.

Convenience and simplicity

One key per user makes key management a breeze. Are you carrying too many keys, or managing a large quantity?

Users can often end up carrying a multitude of keys, creating a nightmare in key management and leading to the question: who has what and who has access to where?

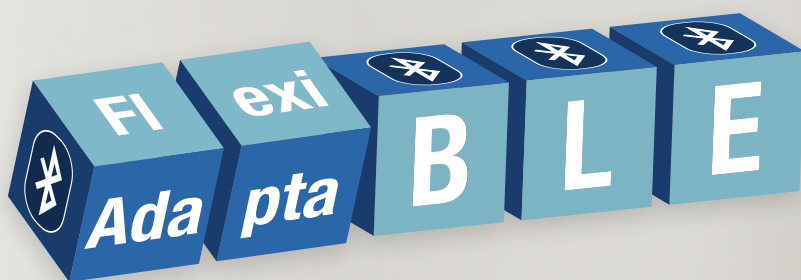

The solution is one key per user.

The benefits of EMKS

- Quick installation
- No wiring or power to locks
- Full Audit Trail
- Time Controlled Access
- Adaptable Design
- Block lost keys

Adaptability

Traditional master key systems are inflexible, and require complex calculation to produce the key combinations needed. This results in a static structure that does not evolve with business needs.

With an EMKS an administrator can amend the system and alter the lock chart, making immediate changes.

Master Keying amendments no longer incur costs or take time to implement.

THE RESULT = COST REDUCED + TIME SAVED

The added benefits of a future-proof system

Traditional key suites can be operated at any time of day or night and provide no audit trail.

Our Electronic Master Key Systems are built with the latest technology and security encryption.

We provide a flexible and secure working environment making sure keys only operate within certain time and date parameters. The lock and keys also hold full audit trails should there be a need to trace site use or investigate an incident.

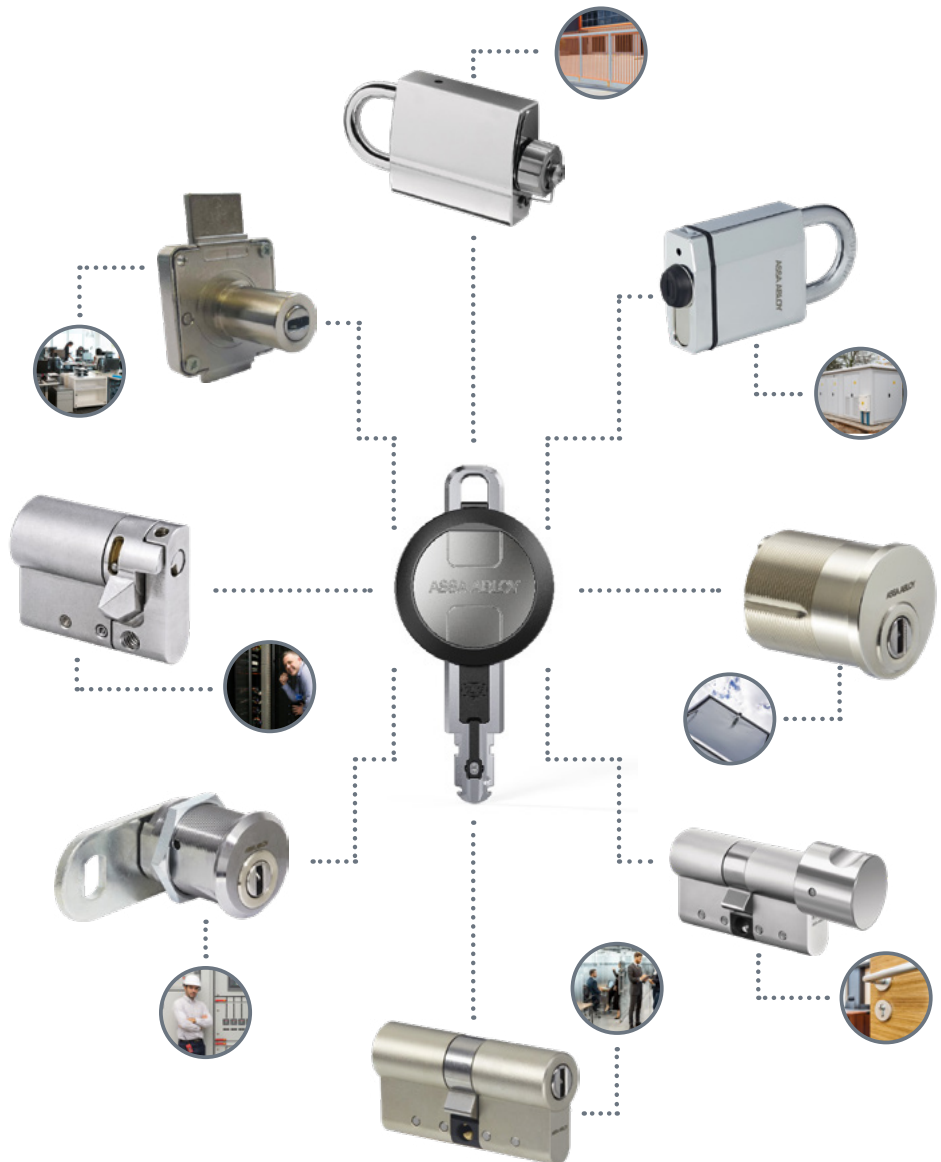

Solutions for all applications

The extensive range of locking products enables us to provide a solution for virtually any requirement.

Digital locking solutions are easy to manage and provide enhanced security for organisations with small premises all the way up to multi-building sites.
